Liver, Gall Bladder, and Head Health

www.standardprocess.com

A throbbing sensation in the head is sometimes associated with a general full or heavy feeling. Often times, these symptoms are accompanied by difficulty sleeping. Standard Process offers many products to help your patients keep their head clear and feeling healthy.

Livaplex[®] is primarily a liver support product that works to promote healthy enzyme production in the liver. These enzymes help the body naturally convert potentially harmful substances into less toxic compounds. Healthy liver function involves the break down of toxins to promote free blood flow. This helps keep the head clear of that full feeling.*

Hepatrophin PMG[®] contains Protomorphogen[™] extracts—uniquely derived nucleoprotein mineral extracts that support healthy cellular repair, replication, and division. The bovine liver PMG[™] extract in this product helps keep the liver in a good state of repair to support healthy liver function. Healthy liver function is important because the liver is responsible for cleansing and metabolic functions. The products of digestion and other materials pass through the liver before entering general circulation to nourish the body.*

Betacol[®] is a member of the liver and digestive support family of products. It enhances the cleansing function of these organ systems and supports their shared roles in metabolizing fats.*

Cruciferous Complete[™] contains kale and Brussels sprouts. These ingredients provide phytonutrients that protect cells from free radicals—highly unstable molecules that can disturb normal cells and genetic material. The nutrients in these cruciferous vegetables also stimulate the body's natural cleansing systems, including the enzymes that detoxify body wastes.*

A-F Betafood[®] contains beet juice—a source of betaine. Betaine has been shown to be an effective lipotropic agent. Lipotropic agents promote the healthy transportation and use of fats and help reduce the accumulation of fat in the liver. Vitamin A supports proper fat storage activity. Vitamin F complex is intimately involved in the healthy metabolism of blood fats. The vitamins and synergistic cofactors found naturally in A-F Betafood support healthy blood flow before and after meals.*

Antronex[®] contains Yakriton—a bovine liver fat extract discovered in the 1920s by Japanese researchers. Yakriton supports healthy liver function by enhancing blood-filtering activities, thereby promoting the liver's natural detoxifying efforts. Histamine is released from cells when tissues become challenged. Yakriton can help balance histamine production.*
